// A class illustrating == and equals().
//
// %> java EqualsDemo
// Different objects, same field:
// e1 == e1LookAlike ->         false
// e1.equals( e1LookAlike ) ->  true
// Same object:
// e1 == e1Too ->               true
//
// Different ArrayLists with equal (but not ==) elements:
// alist0 == alist1 ->      false
// alist0.equals(alist1) -> true
//
// Different TreeMaps with equal keys
// mapping to equal (but !=) values:
// tmap0 == tmap1 ->      false
// tmap0.equals(tmap1) -> true
//
// tmap0.toString() -> {sillykey = EqualsDemo value 1}
// tmap1.toString() -> {sillykey = EqualsDemo value 1}
// Are these Strings == ?    false
// Are these Strings equal ? true
