```
    /**
     * Run the Dictionary lookup.
     *
     * Parse command line arguments for words to look up,
     * "all" prints the whole Dictionary.
     *
     * Then prompt for more words, "quit" to finish.
     *
     * For example,
     * <pre>
     *
     * %> java Lookup shape square circle
     * shape:
     * a geometric object in a plane
     * square:
     * a rectangle having equal sides
     * circle:
     * sorry, no definition found for circle
     *
     * look up words, "quit" to quit
     * word> rectangle
     * a right-angled quadrilateral
     * word> quit
     * %>
     * </pre>
     *
     * @param args the words that we want looked up, supplied as
     *             command line arguments.  If the word "all" is
     *             included, all words are looked up.
     */
