

Figure 2.1. Essential Practices

The purpose of Handwr2 is to write about the 12 agile principles in relation to the create website task of a1 (done in class last Thursday) and the textbook's Essential Practices – Sprint review and artifacts printed above.

Please take a look at <https://www.cs.umb.edu/cs410> and click JHD to see the list of corporations and students. The assignment is alphabetical by wiser's First Name. Your index.html file from your /home/<csusername>/public\_html created last Thursday is copied there for reference.

The agile principles are referenced on the syllabus and I read them aloud last Thursday.

Today your corporation team will outline and write an index.html file to place in your corporation subdirectory at /courses/cs410/public\_html/cs410 and click <corporation>. There are 12, each with 3 or 4 members. Please sit together.

Task a1 as given did not contain all that each student needed and we selected only a single test. Each student worked individually. Next, we work in a small group and share the work.

Before you start a2, please answer this question for each of the 12 agile principles: How does working in a small team make it more possible to follow the advice of agile principle n?
