# Overview:

We want the team to build a website "Green Thumb" This would be a creative web development e-commerce site where the students design and build an online store that has multiple eco-friendly products. The purpose of this site is to encourage environmentally conscious choices by offering reusable, eco-friendly products that reduce waste and support a greener lifestyle.

## Home Page

- Warm welcome message introducing the market and its mission
- Nav bar to other pages
- Search bar to find products by key words or name
- Little random plant generator
  - A user can click a button and it will have a spin animation and then display a plant
  - Under the display there will be a description of the plant and why it's good/known for
  - There will be a button to generate a new plant or take them to the product card of that plant
  - This generator can be a pop up or part of the home page

## Shop Page

- To start, 5 products for now, with name, image, short description and price (can use placeholder images)
- Product cards for easy browsing
- Consistent color scheme
  - Example products:
    - Reusable water bottle
    - Cotton Tote bag
    - Steel Straw set
    - Succulents
    - Flower seeds

## Cart & Checkout
- Cart page updates automatically when products are added or removed
- Payment system

## About Page
- Short backstory of website
- Motto and guiding values
- What makes the shop special and unique
- Tips for sustainable living
- Why reusable products matter and how we help with this
- IMPACT tracker:
  - This can be numbers updated from an actual science site but showing different environmental stats

- Trying to emphasize that aspect of why green living matters

# Customer Reviews Page
- Displays reviews of site
- Star rating system or similar
- Submission form
