CS Website Tour and Update

Background: When the CS Department moved to McCormack 3rd Floor in 2021, we ended our traditional proximity to the Math Dept., now in Wheatley, but we continued to be located next to Engineering.

Our labs got separated from our front desk and main office corridors.

Some of our classrooms are next door in Wheatley.

Check our CS Website for faqs and facilities updates needed. List, fix and do pulls from github.

New ground: Our CS servers are now amazingly fast.

But fewer students access our servers directly, preferring an IDE like VSCode, and fewer instructors require homework to be submitted on the servers.

Located behind two firewalls, almost totally free of spam and staffed by: Leonard David, Tom Mullaly and Tony Pera.

Suggest tours to expand our CS Website to offer video clips, actual screens and what you can do there.

Research server ideas, show password-less login, emacs, latex, pdfs, compiles of all language libraries, running large programs. Capture video clips of screen moments. Use VLC to combine clips. Tell our story.

Prof. Daniel Hahn is in charge of our website, so we will follow his procedure for updates. We'll start by making a copy of the website. Then we'll identify changes to make.
